                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention comprises peptides having calcium channel blocking activities which are derived from the venomous saliva of assassin bugs. The calcium channel blocking peptides of the invention are useful for treating stenocardia, hypertension, myocarditis, arrhythmia and cerebral ischaemia. The present amino acid sequence represents a cone snail wconotoxin peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Vasotropic, cardiant, neuroprotective, cerebroprotective, antioprofitable vasotropic, cardiant, neuroprotective, cerebroprotective, cardiant, antipiffammatory, antimigraine, antidiabetic, tranquiliser, vulnerary, antipipsychotic, anxiolytic and neuroleptic. Peptides of the invention act by modulating the activity of voltage gated ion channels. They may be used for treating or preventing disorders associated with voltage gated ion channels such as neurological disorders, e.g. seizure (associated with epilepsy), neurotoxic injury associated with conditions of hypoxia, anoxia, ischaemia, stroke, cerebrovascular accident, brain or spinal chord trauma, drowning, suffocation, perinatal asphyxia or hypogalycaemic events; pain e.g. migraine; inflammation or cardiovascular disorders. They may also be used for treating psychiatric disorders e.g. psychosis, anxiety or schizophrenia. The analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated omega-conopeptides, nucleic acid sequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic, anticonvulsant,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method for detecting or measuring the form of Motch that mediates Norch signal transduction in a sample of cells. The method involves detecting or measuring the expression of a Norch heterodimer containing reducing agent-sensitive linkage in the cells and comparing detected or measured expression to the detected or measured expression of full-length Notch in the cells. The present sequence is Xenopus Notch/Xotch (XenN) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to isolated omega-conopeptides, nucleic acid sequences encoding them, and propeptide sequences. The activity of the peptides of the invention may be described as, analgesic, anticonvulsant, vasotropic, cardiant, neuroprotective, cerebroprotective, cardiovascular, antiinflammatory, antimigraine, antidiabetic, tranquiliser, vulnerary, antipsychotic, anxiolytic and neuroleptic. Peptides of the invention act by modulating the activity of voltage gated ion channels. They may be used for treating or preventing disorders especiated with voltage gated ion channels such as neurological disorders, e.g. seizure (associated with epilepsy), neurotoxic injury associated with conditions of hypoxia, anoxia, ischaemia, stroke, cerebrovascular accident, brain or spinal chord trauma, drowning, suffocation, perinatal asphyxia or hypoglycaemic
                                                                                                                                                                                                                                                                                                                                                                          neuroprotective; cerebroprotective; cardiovascular; antiinflammatory; antimigraine; antidiabetic; tranquiliser; vulnerary; antipsychotic; antidiabetic; voltage gated ion channel; seizure; epilepsy; neurological disorder; neurotoxic injury; hypoxia; anoxia; sehamia; stroke; cerebrovascular accident; brain trauma; spinal chord trauma; drowning; suffocation; perinatal asphyxia; hypoglycaemic event; pain; migraine; inflammation; cardiovascular disorder; psychosis; anxiety; schizophrenia.

events; pain e.g. migraine; inflammation or cardiovascular disorders. They may also be used for treating psychiatric disorders e.g. psychosis, anxiety or schizophrenia. The analgesic agents of the invention show diminished side effects and toxicity, and are non-addictive. The sequences given in records ABB96698-A3B96806 represent omega-conopeptide generic toxin sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of omega-cono-peptide(s) which selectively inhibit voltage-gated calcium channels - to induce analgesia, enhance opiate analgesics, treat

The sequences given in AAR39608-30 are omega conopeptides (OCTS) and derivatives of these, which may be used to produce analgesia in a mammal. These OCTs inhibit voltage-gated calcium channels selectively in neuronal tissue. This is shown by the peptides ability to stimulate contraction in guinea pig ileum and to bind to OCT MVIIA binding sites present in neuronal tissue. OCTs are components of peptide toxins derived from marine snails of the genus Conus, and act as calcium channel blockers. These OCTs may be used to replace opiods in the treatment of chronic pain or to reduce the opiod dosage required. This helps to reduce dependence on and tolerance to opiod narcotics. The sequences given in AAR39608-30 are omega conopeptides (OCTS) and derivatives of these, which may be used to produce analgesia in a mammal. These OCTS inhibit voltage-gated calcium channels selectively in neuronal tissue. This is shown by the peptides ability to stimulate contraction in guinea pig ileum and to bind to OCT MVIIA binding sites present in marrons itssue. OCTS are components of peptide toxins derived from marine snails of the genus Conus, and act as calcium channel blockers. These OCTS may be used to replace opiods in the treatment of chronic pain or to reduce the opiod dosage required. This helps to reduce dependence on and tolerance to opiod narcotics. (Updated on 25-MAR-2003 to correct PN field.)

rechaemia-related neuronal damage in mammals is reduced by admin., 4-24

hr after onset of ischaemia, of a cpd. (I) which binds selectively to an omega-conoctomia (OCT) WVITA site in neuronal tissue. (I) has selectivity

that for the MVIIC site. (I) is one of the OCTS MVIIA, MVIIB, GVIIA, GVIIA, at least 100 expressed as ratio of binding affinity for the MVIIA site to that for the MVIIC site. (I) is esp. used to reduce neuronal damage caused by stroke. By delaying admin. For some time (compare USSOS1403 where cpds. are given within 1 hr of the onset of ischaemia) a greater redn. in neuronal damage is achieved. (I) is admin. e.g. by intracerbroventricilar (ICV) injection at 0.1-20 microg/Kg, but can also be given i.v. (opt. after treatment with antihistamines to minimise redn. in blood pressure caused by (I)). (I) is also at least as effective as the specified conotoxins for (I) selective inhibition of N-the specified conotoxins for (I) selective inhibition of N-channel mediated neurotransmitter release in neuronal tissue. Primary sequences of omega-conopeptides are given in AAR37752-62. Several analog or of the specified sare given in AAR37752-62. Several analog or omega-conopeptides are given in AAR37752-62. The present peptide is an omega conopeptide, useful as an analgesic, especially for treating neuropathic pain. The peptide, which can be prepared by solid phases synthesis, can also be used to inhibit neuronal damage and treat schizophrenia, tardive dyskinesia, acute dystonic reactions, inflammation and epilepsy. In a rat paw formalin test, the peptide had an EDSO of greater than 1.0 microg in phase 1, and greater than 1.0 microg in phase 1, and greater than 1.0 microg in phase 2 (by intrathecal administration). (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                              Omega conopeptide; analgesic; treatment; neuropathic pain; inhibition; neuronal damage; schizophrenia; tardive dyskinesia; analgesia; acute dystonic reactions; inflammation; epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Omega cono:peptide(s) - useful as analgesics, esp. for treating neuropathic pain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAM19544-W19553 are naturally occurring omega conopeptides (OCS) isolated from Conus sp. (cone snails). The peptides and their analogues are used as analgesics acting by blocking N-rype voltage-sensitive calcium channels. The OCS can be used to treat neuropathic pain as a result of e.g. insult to the spinal cord or peripheral nerves, cancer, bone degenerative diseases, AIDS, reflex sympathetic dystrophy, herpes zoster neuropathy, diabetic neuropathy, hyperesthesia, allodynia or hyperalgesia. The OCs are preferably administered in a medicament via an chyperalgesia. The OCs are preferably administered in a medicament via an epidence of a permeation endancer, at doses that are comparable to absence of a permeation enhancer, at doses that are comparable to effective analgesic doses using intrathecal administration. OC effective analgesic doses using intrathecal administration. OC commulations comprising an OC and a carboxylic acid buffer anti-oxidant. They also confer stability to solutions containing them for prolonged contains the containing th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                   A method has been developed for the treatment of inflammation in a subject. The method comprises administration of an omega-conopeptide effective to: (i) block voltage-gated calcium channels; (ii) bind with high affainty to an omega-conopeptide binding site; and (iii) inhibit neurotransmitter release from nervous tissue. The method is used to treatmention and associated pain. The treatment can also be used to produce analgesia (especially in subjects experiencing neuropathic pain); and to treat schizophrenia, tardive dyskinesia and acute dystonic represents a natural omega-conopeptide. Omega-conopeptides are components of peptide toxins produced by marine snails of the genus components act as calcium channel blockers. (Updated on 27-AUG-2003 to correct OS

A method has been developed for the treatment of inflammation in a subject. The method comprises administration of an omega-conopeptide effective to: (i) block voltage-gated calcium channels; (ii) bind with high affanity to an omega-conopeptide binding site; and (iii) inhibit neurotransmitter release from nervous tissue. The method is used to treat inflammation and associated pain. The treatment can also be used to produce analgesia (especially in subjects experiencing neuropathic pain); and to treat schizophrenia, tardive dyskinesia and acute dystonic reactions, rheumatoid arthritis, and epilepsy. The present sequence represents a natural omega-conopeptide. Omega-conopeptides are components of peptide toxins produced by marine snails of the genus Conus, and which act as calcium channel blockers. (Updated on 27-AUG-2003 to correct OS

                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                     Sequences AAW95564-573 represent primary sequences of natural omegaconopeptides. Omega-conopeptides are components of peptide toxins produced by marine snails of the genus Conus, and which act as calcium channel blockers. The invention relates to a method of producing analgesia in a mammal that comprises administering an omega conopeptide having activities in (a) inhibiting electrically stimulated contraction of guinea pig ileum and (b) selectively binding to omega conopeptide WVIIA binding sites in neuronal tissue, where these activities are within the ranges of those of omega-conotoxins WVIIA and TVIA. The method is
                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Omega-conopeptide; peptide toxin; snail; calcium channel blocker; analgesia; guinea pig ileum; omega-conotoxin; pain; neuropathic.
                                                                                                                                                             Production of analgesia in mammal - by administration of omega
                                                                                                                                                                                                                                                                                                                                    ;

Sequences AAW95564-573 represent primary sequences of natural omegaconopeptides. Omega-conopeptides are components of peptide toxins produced by marine snails of the genus Conus, and which act as calcium channel blockers. The invention relates to a method of producing analgesia in a mammal that comprises administering an omega conopeptide having activities in (a) inhibiting electrically stimulated contraction of guinea pig ileum and (b) selectively binding to omega conopeptide WIIA binding sites in neuronal tissue, where these activities are within used for treating chronic pain, especially neuropathic pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        binding;

A method has been developed of selecting a test compound for treating inflammation. The method comprises measuring the activity of the test compound in blocking voltage-gated calcium channels, binding to the omega conopeptide binding steam of inhibiting norepinephrine (noradrenaline) release from nervous tissue. The method is useful for selecting compounds for treating inflammation. The selected compounds are capable of producing analgesia in a mammalian subject with chronic or intractable pain. Analgesic caused by selected compounds may reduce the reliance on opioid analgesic agents of the prior art which cause dependency and tolerance, requiring potentially dangerous increases in opioid doses to achieve the analgesic effect. The present sequence represents an omega conopeptide given in the present invention

Measuring the activity of test compounds in blocking voltage-gated calcium channels, binding to the omega conopeptide binding site and inhibiting norepinephrine (noradrenaline) release for treating inflammation

The present sequence represents an omega-conotoxin. Omega-conotoxins are isolated from venoms of predatory marine snalls, and have a selectivity for N-type calcium channels over P/O type channels, and so block N-type calcium channels. The omega-conotoxins of the invention can be used in any disease or disorder where blockage of N-type calcium channels is required, e.g. in the reduction of neuronal damage following ischemia, production of analgesia, or enhancement of opiate analgesia, in the treatment of schizophrenia, stimulant induced psychoses, hypertension, inflammation, and diseases which cause bronchotension, and also in the inhibition of progression of neuropathic pain. They can also be used in screen to identify compounds with activity at N-type voltage sensitive

calcium channels

Novel peptides used for the treatment of disorders and diseases where blockage of the N-type calcium channels is required.

Omega-conopeptides are components of peptide toxins produced by the cone snails, and which act as calcium channel blockers. Natural omega-conopeptides and their derivatives may be useful for producing analgesia in nociceptive and neuropathic pain. The peptides bind to omega-conopeptide binding sites, which are present mainly in neuronal tissue, and inhibit norepinephrine release from nervous tissue. Conopeptides such as MVIIA and TVIA are effective as therapeutic agents for treating neurogenic conditions such as schizophrenia, tardive dyskinesia and acute dystonic reactions, inflammation and epilepsy
                                                                                                                                                                                                                                                                                               Marine snail; omega-conopeptide; calcium channel blocker; MVIIC; SNX-230;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Selecting a compound for producing analgesia involves measuring activity of test compound in blocking voltage-gated calcium channels, binding to omega conopeptide binding site and inhibiting norepinephrine release.

The present sequence is an omega-conopeptide from marine snails of the genus Conus. Omega-conopeptides are components of peptide toxins produced by the cone snails, and which act as calcium channel blockers. Natural omega-conopeptides and their derivatives may be useful for producing analgesia in nociceptive and neuropathic pain. The peptides bind to omega-conopeptide binding sites, which are present mainly in neuronal tissue, and inhibit norrepinephrine release from nervous tissue. Conopeptides such as WVIIA and TVIA are effective as therapeutic agents for treating neurogenic conditions such as schizophrenia, tardive dyskinesia and acute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Selecting a compound for producing analgesia involves measuring activity of test compound in blocking voltage-gated calcium channels, binding to omega conopeptide binding site and inhibiting norepinephrine release.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 26;

                                                                                                                                                                           epilepsy.
                                                                                                                                                                                                   Conus sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Singh T,
           RESULT 93
AAB19450
                                                             The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a
reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
a less therapeutically active amino acid region (IV), which covalently
conds with amino/hydroxyl/thiol groups on blood components to form a
peptidase stabilised therapeutic peptide composed of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth
factors and neurotransmitters, to protect them from peptidase activity in
vivo for the treatment of various disorders. Endogenous therapeutic
peptides are not suitable as drug candidates as they require frequent
administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or
reduces the action of peptidases to increase length of activity (half
IIfe) and specificity as bonding to large molecules decreases
intracellular uptake and interference with physiological processes.

Omega-conopeptides are components of peptide toxins which act as voltage-gated calcium channel inhibitors. The peptides are used to enhance the analgesic effect produced by an opiate in a mammalian subject. The method comprises administering to the subject an omega-conopeptide which is able to inhibit electrically stimulated contraction of the guinea pig ileum and bind to omega-conopeptide MVIA binding sites present in neuronal tissue. Omega-conopeptides are useful for enhancing the analgesic effect produced by an opiate. Omega-conopeptides may also be used in the treatment of pain, in reducting neuronal damage related to an ischemic condition in mammals, and in treating schizophrenia, tardive dyskinesia and acute dystonic reactions, inflammation and epilepsy
                                                                            Enhancing analgesia produced by opiates by administering an omega-
conopeptide that inhibits electrically stimulated contraction of guinea
pig ilium and binds to omega-conopeptide MVIIA binding sites in neuronal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

The invention comprises peptides having calcium channel blocking activities which are derived from the venomous saliva of assassin bugs. The calcium channel blocking peptides of the invention are useful for treating stenocardia, hypertension, myocarditis, arrhythmia and cerebral ischaemia. The present amino acid sequence represents a cone snail wconotoxin peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents an omega-conopeptide. Omega-conopeptides are components of peptide toxins which act as voltage-gated calcium channel inhibitors. The peptides are used to enhance the analgesic effect produced by an opiate in a mammalian subject. The method comprises administering to the subject an omega-conopeptide which is able to inhibit electrically stimulated contraction of the guinea pig ileum and bind to omega-conopeptide MVIA binding sites present in neuronal tissue. Omega-conopeptides are useful for enhancing the analgesic effect produced by an opiate. Omega-conopeptides may also be used in the treatment of pain, in reducing neuronal damage related to an ischemic condition in mammals, and in treating schizophrenia, tardive dyskinesia and acute dystonic reactions, inflammation and epilepsy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Enhancing analgesia produced by opiates by administering an omega-
conopeptide that inhibits electrically stimulated contraction of guinea
pig illum and binds to omega-conopeptide MVIIA binding sites in neuronal
tissues.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for manufacturing a peptide library comprising a peptide (1) having 2 or more intramolecular disulphide (ID) bonds, and its variants (V). The method comprises containing two or more amino acids, for chemo-synthesising (1) and (V), where the ID bonds are formed between the peptides by air oxidation, and ID-containing peptides are separated. Also described are: (1) a peptide inbrary obtained by the above said method; (2) screening for mutant peptide with an improved biological activity than its wild type, comparising comparing the biological activity than its wild type, peptide library with a wild type peptide; (3) a mutant peptide obtained by the above said screening method; and (4) a calcium channel blocker containing Omega-conotoxin MVIIC peptide. The method is useful for synthesising a peptide library, and for screening peptides with increased biological activity than the wild type peptides. The method is suitable for producing many number of variants for a given peptide.

This sequence represent omega-conotoxins isolated from Conus magus.

This sequence represents the MVIIC Conus magus omega-conotoxins. Conus verom contains three types of disulphide rich peptides, these are the alpha-conotoxins target and block the nicotinic acetylcholine receptors, the mucronotoxins target and block the nicotinic acetylcholine receptors, the mucronotoxins target and block the presynaptic neuronal calcium con channels. The omega-conotoxin peptides of the invention can target P-conotoxins target and block the presynaptic neuronal calcium con channels. The omega-conotoxin peptides of the invention can target P-conotoxins target and block the presynaptic neuronal calcium con channels are presented of calcium ion channels when the presence or absence of sites for the peptides can be used for distinguishing the types of calcium ion channel capressing calls into various types. As these sequences affect the control of respiratory rhythms in vivo, they can be used to evaluate abnormalities in respiratory control which are particularly severe in the neonatal period. The peptides can also be used for assessing neural captal period. The peptides can also be used for assessing neural captal can be used to evaluate abnormalities in respiratory control which are particularly severe in the developmental period. The peptides can also be used for assessing and can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sea squirt protein with tissue specific expression in development Seq112.
                                                                                                                                                                                                                                                                                                                                                                                                                                New omega-conotoxin peptide(s) - which target P-type and N-type calcium ion channels, used for distinguishing calcium channels or for disgnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sea squirt, regeneration medicine, gene therapy, cell proliferation, differentiation, reproduction, environmental measurement, water survey.

The invention relates to a method of inducing differentiation of at least one epithelial cell. The method involves exogenously providing at least one epithelial cell. The method involves exogenously providing at least one opithelial cell, whereby the Notch pathway is activated within at least one epithelial cell, whereby the Notch pathway is activated within at least one epithelial cell, whereby the Notch pathway is activated within at least one epithelial cell, producing differentiation of the call is induced. Methods of producing differentiation of at least one epithelial barrier cormation, for retarding progression of skin cancer and for diagnosing agreesive melanoma are also provided. The methods are useful for inducing differentiation of at least one epithelial cell e.g. a careful for inducing differentiation of epithelial cell within cutaneous epithelial tissue or dermal equivalent, or within extracutaneous epithelial tissue, gastrointestinal epithelial tissue, cornea epithelial tissue, cornea epithelial contraction of the progression of skin contraction of the progression of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cancer such as aggressive melanoma, aggressive cutaneous T-cell lymphoma (CTCL), aggressive squamous cell carcinoma, or aggressive basal cell carcinoma, or aggressive basal cell carcinoma, by preferably administering an antagonist of the Notch pathway such as gamma secretase inhibitor. The present sequence represents a
                                                                                                                                                                                                                                                                                              formation within epithelium for treating psoriasis, sunburn, involves exogenously providing a source of a Notch agonist to the epithelial cell.
                                                                                                                                                                                                                                                                     epithelial cell useful for inducing barrier
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human; NOVX; cardiomyopathy; atherosclerosis; cancer; diabetes; inflammation; autoimmune disorder; allergy; blood disorder; acquired immunodeficiency syndrome; AIDS; obesity; asthma; immunoglobulin (Ig)A nephropathy; cirrhosis; arthritis; Alzheimer's disease; infection; str.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to novel genes and the encoded proteins thereof
that are derived from the sea squirt Ciona intestinalis. Specifically, it
refers to those genes that are expressed in the tissues or organs of the
cas squirt during its developmental phase. The present invention
describes the identification of these genes as useful for elucidation of
the mechanism of development and hence for developing regeneration
medicines and gene therapy techniques. Accordingly, they can be used in
the research of various genetic diseases, as well as the analysis of cell
proliferation, differentiation and reproduction. Furthermore, such
compositions can be useful for environmental measurements and water
surveys, particularly for sea water surveys, and also for the preparation
of transformed sea squirt for improving edibility of sea squirt such as
Halocynthia roretzi. This polypeptide sequence is a sea squirt protein
sequence that has tissue specific expression during development, given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              7
                                                                                                                                                                                                                      Novel gene cluster which is specifically expressed in tissue or organ during developmental phase of sea squirt, useful for elucidation of mechanism of development of tissue or organ of sea squirt.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cell differentiation, notch; epidermis; cytostatic; dermatological; epithelial; skin; cancer; gamma secretase; notch-1.

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing or pharmacogenomics.

Disclosure; SEQ ID NO 469; 1498pp; English.

This invention relates to a novel nucleic acids, and encoded polypeptides thereof, which have properties related to the stimulation of biochemical or physiological responses in a cell, tissue, organ or organism.

diagnostic and prognostic assays and furthermore in the treatment of diagnostic and prognostic assays and furthermore in the treatment of diagnostic and prognostic assays and furthermore in the treatment of diagnostic and diagnostic as well as methods to modulate their expression using antisense oligos, riboxymes and peptide nucleic acids.

The NOVX polypeptides, polynucleotides and antibodies are useful in the treating or preventing NoVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, cancer and diabetes. Furthermore, they may be used in treating or preventing diseases such as inflammation, autoimmune treating or preventing diseases such as inflammation, autoimmune fullery, atherity, asthma, immunoglobulin (19)A nephropathy, cirrhosis, arthritis, Alzheimer's disease, infections, stroke, muscular dystrophy arthritis, Alzheimer's disease, infections, stroke, muscular dystrophy and employers, the monoglopulin (19)A nephropathy, cirrhosis, and epilepsy, Accordingly, these molecules have many activities including cytostatic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic, hemostatic, nephrotropic, antiarthritic, hepatotropic, anorectic, cultaxant and anticonvulsant. In addition, they are useful in screening casasays to identify small molecules that modulate or inhibit, for example, neurogenesis, wound healing and angiogenesis. The nucleic acids are also the incorporation of a human NOVX protein of the angent of a human NOVX protein ö Gaps Specifically, it refers to the use of biologically active fragments ; Query Match 56.7%; Score 68; DB 5; Length 2444; Best Local Similarity 30.8%; Pred. No. 1.5e+03; Matches 8; Conservative 12; Mismatches 6; Indels 248 GFTGQNCEENIDDCPGNNCKNGGACV 273 2 XIXNOXCXOXLDDCCSXXCNXXNXCV 27 Search completed: April 18, 2005, 20:33:43 Job time : 127.5 secs Sequence 2444 AA; of the invention. 셤 8

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence Sequence Sequence S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 19, Application US/08496847

Sequence 19, Application US/08496847

Patent No. 5795864

GENERAL INFORMATION:

APPLICANT: Ametutz, Gary A.

APPLICANT: Gohil, Kishrorchandra

APPLICANT: Adriaenseens, Peter I.

APPLICANT: Kristipati, Ramasharma

TITLE OF INVENTION: METHODS AND

TITLE OF INVENTION: FORMULATIONS FOR PREVENTING PROGRESSION OF NEUROPATHIC PAIN NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:

ADDRESSEE: Dehlinger & Associates

STREET: 350 Cambridge Avenue, Suite 250

GITY:

CITY:

CI
APPLICANT: VALENTINO, KAREN L
APPLICANT: MILJANICH, GEORGE P
TITLE OF INVENTION: METHODS OF PRODUCING ANALGESIA AND
TITLE OF INVENTION: BETHODS OF PRODUCING ANALGESIA
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:
ADDRESSED: Law Offices of Peter Dehlinger
STREET: 350 Cambridge Avenue, Suite 300
CITY: Palo Alto
STATE: CA

Patent No. 6054429

GENERAL INFORMATION

APPLICANT: Bowersox, S. Scott

APPLICANT: Bettus, Mark, R.

APPLICANT: Luther, Robert, R.

TITLE OF INVENTION: IMPROVED EPIDURAL

TITLE OF INVENTION: METHOD OF PRODUCING ANALGESIA

NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:

US-09-270-767-33762
Sequence 33762, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
JAPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 33762
LENGTH: 321
GENERAL INFORMATION:

APPLICANT: Artavanis-Teakonas, Spyridon
APPLICANT: Q1, Hullin
TITLE OF INVENTION: ACTIVATED FORMS OF NOTCH AND METHODS BASED THEREON
FILE REFERENCE: 7326-046
CURRENT APPLICATION NUMBER: US/08/899,232
CURRENT FILING DATE: 1997-07-23
NUMBER OF SEQ ID NOS: 4
SOFTWARE: Patentin Ver. 2.0
LENGTH: 2556
TYPE: PRI

Sequence 19, Application US/08185432
Patent No. 5750652
GENERAL INFORMATION:
APPLICANT: Artavanis-Tsakonas, Spyridon
APPLICANT: Busseau, Isabelle
APPLICANT: Diederich, Robert J.
APPLICANT: W. Tian
APPLICANT: Mateuno, Kenji
TITLE OF INVENTION: DELTEX PROTEINS, NUCLEIC ACIDS, AND
ATTLE OF INVENTION: ANTIBODIES, AND RELATED METHODS AND COMPOSITIONS
ANTANED OF COMPUNITY.
Parent No. 6436650
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Attavania-Teakonae, Spyridon
APPLICANT: Qi, Huilin Transon:
TITLE OF INVENTION: ACTIVATED FORMS OF NOTCH AND METHODS BASED THEREON
FILE REFERENCE: 7326-046
CURRENT APPLICATION NUMBER: US/08/899,232
NUMBER OF SEQ ID NOS: 4
SOFTWARE: Patentin Ver. 2.0
